

100%, material and equipment procurement of nearly 96%, construction and installation of nearly 88% and test running of nearly 26%.

Exchanging views with PVN officials, contractors, the workers of the construction units, at the construction site, DPM Le Van Thanh highly appreciated and praised the investor, the project management board, and the EPC general contractor for the high responsibility, strength, methodical and scientific implementations in the organization, financial, personnel activities, administration and contracts. Up to now "We have successfully organized the first ignition milestone for unit 1 by oil in the time schedule as planned", said DPM.

The DPM requested to mobilize the means to ensure the planned progress milestones, in which to strive for connecting with the power system by oil on April 30, 2022. DPM is also required for ensuring absolute safety in the project construction, installation, test running and operation; improving the adequate care on health, material and spiritual life of employees; coordinating with Thai Binh local authorities to well ensure security inside and outside of the power plant.

The Deputy Prime Minister emphasized environmental protection and "greening" the construction site. After inspecting, DPM Le Van Thanh had a meeting with the leaders of PVN, contractors and construction units about the project. After inspecting, DPM Le Van Thanh had a meeting with the leaders of PVN, contractors and construction units about the project.

## **TRA VINH APPROVES INVESTMENT OF 96MW WIND POWER PLANT**

The Mekong Delta province of Tra Vinh has approved the investment plan and investor of the 96 MW Thang Long wind power plant in Luong Hoa A commune, Chau Thanh district.

The project, which has total investment of 3.86 trillion VND (169 million USD) by Thang Long Tra Vinh Wind Power JSC, is the ninth of its kind licensed in Tra Vinh. So far five plants have become operational with total capacity of 322 MW. The project has 24

turbines, covering nearly 600 hectares, including 545 hectares of water surface.

It is scheduled to become operational in the third quarter of 2023. Nguyen Quynh Thien, Vice Chairman of the People's Committee of Tra Vinh said that the committee has proposed the Prime Minister approve the addition of wind, solar, biomass and gas power projects in the province with a total capacity of more than 46,500 MW to the National Power Development Planning for the 2021-2030 period with a vision to 2045./.
